All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overiap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion In the event that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: This record contains 92 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Center code: WIBR

                                                                                                                                                                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of 24 contigs. The true order of the pieces is not known and their order is this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           100 bp

Chote Wester: PT7T3D-Pac (Pharmacia) with a modified Polylinker; Site 1: Not I; Site 2: Eco RI; Ist strand cDNA was prepared from 12 pooled bulk tumor samples and primed with a Not I - Collog(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AU135588 AU135588 PLACZ1 Homo sapiens cDNA clone PLACE1002437 5', mRNA

Clone distribution: MGC clone distribution information can be found through the T.M.A.G.B. Consortium/Lint at: http://image.ilnl.gov Series: IRAK plate: 52 Rows of Column: 19
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 5915657 This clone has the following problem: incomplete processing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Web: www.genoscope.crs.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (EDGP) - http://www.edgp.cbi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CBPH (Centre of Etuce du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton pBelobACl1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .,

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP brosophila melanogaster BAC library was prepared by Kazucoyo 30eogawa and Aaron Mammosor in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffallo, NY. The Library is named RP2CT-98 and was constructed by partial Goored Genetics at the Roswell Park Cancer Institute in Buffallo.

NY. The Library is named RP2CT-98 and was constructed by partial isogenic strain y2; or bw sp. the same strain used for the BDGP's place and BST libraries. A more detailed description of the library or fillers for hybridization from the BACPAC Resource Center can be found at http://bacpac.mec.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCT-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.ouffalo.edu/drosophila_bac.hum.

681 bp DNA linear GSS 13-MAY-2000 nigroviridis genome survey sequence PUC-Cri end of clone library G from Tetraodon nigroviridis, genomic survey
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                               Web: www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP)-http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Ettude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Actinopterygii; Neopterygii; Teleostei; Buteleostei; Neoteleostei; Acanthomorpha; Acanthopterygii; Teleostei; Buteleostei; Neoteleostei; Acanthomorpha; Perraodontides; Petraodontides; Petraodon.

Adenosine triphosphate (ATP) binding cassette (A3C) polynucleotide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis

Claim 1; Page 143-144; 215pp; English.

The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) I gene. ABCI resides in cell membranes and utilises ATP indoloysis to transport a wide variety of substrates across the plasma membrane. ABCI is a priorial protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tanglar disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome 9422-9431. The ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of chert disease and other disorders associated with hypercholesterolemis and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indiadtors of cardiovaccular disease and cother disorders associated with hypercholesterolemia.

Adenosine triphosphate (ATP) binding cassette protein (ABC) 1 polynucleotides and polypeptides, useful for treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis

Disclosure, Page 138-139; 211pp; English.

The present sequence represents the 5' fianking region of the huumar adenosine triphosphate (ATP) binding cassette protein (ABC) 1 gene. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the appolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9q22-9q31. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.

                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density lipoprottein-cholesterol (HDL-C) level, a higher than normal trigiveride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABCI expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected a

The invention relates a nucleic acid which is capable of regulating the transcription of human ATP-binding cassette 1 (ABC1) gene, which is a casual gene for pathologies linked to a dysfunctioning of cholotis a metabolism, including diseases such as atherosclerosis. Polynucleotides of the invention are used to screen candidate molecules or substances of that are capable of modulating the transcription of the ABC1 gene. They are used to artisense therapy. Compositions comprising sequences of the invention are used to treat inspercholesterolaemia and atherosclerosis. The present sequence is human ABC1 transcription regulating DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1879
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1704

```
The invention relates to an isolated human large ATP-binding cassette transporter 1 (ABC1) promoter capable of directing transcription of neterologous coding sequence positioned downstream to it. The hABC1 promoter is useful for expressing foreign DNA in a host cell, by introducing into the host cell a gene transfer vector comprising the promoter operably linked to a foreign DNA encoding a desired polypeptide or RNA, where the foreign DNA is expressed. The gene transfer can be introduced into the host cell by adecovirus infection, liposome-mediated transfer, topical application to the cell or microlnjection. The gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          transfer vector encodes and expresses a resorter molecule. The method further involves introducing into the cell a gene transfer vector comprising a nucleic acid segment encoding a transactivator protein capable of upregulating the ABCI promoter, or contacting the cell with the transactivator protein, or an agonist of the transactivator protein, or an agonist of the transactivator protein Modulators of human ABCI gene expression are useful for treating atherosclerosis. The present sequence represents the MABCI promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human large ATP-binding cassette transporter 1(hABC1) promoter sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated human large ATP-binding cassette transporter 1 promoter capable of directing transcription of heterologous coding sequence positioned downstream to it, useful for expressing foreign DNA in bost
